

HAND CRAFT DESIGN

flis

Table modules

flis stands for a modular table system that grows with the user. The individual elements, such as table legs and tabletop as well as a frame element under the table, are available in various lengths and widths. This gives users the opportunity to design their own table according to their needs. Different table leg lengths allow the usability to be re-functionalized. Thus, a dining table can be converted into a standing table or a coffee table into a desk. In the future, a concept for furniture rental is to be developed. It is planned to introduce a barter system at the selling companies for table modules that are no longer needed, need repair or an upgrade. In this way, the children's painting table becomes a desk or the single desk becomes an office landscape for the growing company. Future needs can be better addressed and there is more certainty for a circular trade of products and materials to counteract waste and short-livedness.

KEILVERBINDER SYSTEM

The basic guiding principle of the table is its demountability. The legs are slid on via a concealed wedge connection and connected to the tabletop with a positive and non-positive fit. This happens without tools and can be released at any time.

The wedge connectors are mounted under the table top. Via a groove in the feet, the connection is secured form and force-fit.

Beschlagsystem

www.keilverbinder.de

The tabletop and feet are designed to be minimally invasive. They are made largely from renewable raw materials and have been designed to be robust and durable. Few individual parts and large plate dimensions, which only take „material

damage“ through the screwed-on wedge connectors, can be used as new construction material even after the demise of the tabletop. Recycling or downcycling thus does not necessarily have to take place.

Ecological advantage

- A large part consists of natural materials and renewable raw materials
- Repairable and detachable construction
- Material damage to the panel is caused only by the wedge connectors
- In the future, recycling or downcycling recycling or downcycling must take place

Economic advantage

- Fast, situation-dependent adjustment
- Space-saving transport and storage
- Light weight, easy relocation
- Low purchase price for a comparatively high-quality piece of furniture
- Color and size variations, promote individuality
- The system will also be able to offer itself for the optimized materials that will be created in the future.

Users have the possibility to convert different table tops and leg heights in a short time for their own current needs. Because it can be disassembled, larger quantities of tables can be stacked, stored and transported in a space-saving manner. The reduced weight of the table allows for easy relocation. The unpretentious production of a table

lowers the purchase price for a comparatively high-quality piece of furniture. Customers have the possibility to choose between a variety of board materials and materials. The system will also be able to offer itself for the optimized materials that will be developed in the future.

At first glance, the detachable system does not reveal that it is designed for this purpose. The appearance suggests a solid, robust table frame, which many competing products lack. A valuable appearance concept is created in any constellation. An update option for the near and distant future allows you to choose sizes and shapes according to

your needs, follow trends and use an exchange offer of tops. Legs and top are independent of each other, customers can also purchase only them and receive assembly instructions for the wedge connectors. Thus, they have the opportunity to act individually and by their own creation thus draw a new emotional value from their table.

Aesthetic advantage

- Invisible, detachable connection
- The appearance suggests a solid, robust table frame
- In any constellation a valuable appearance concept is created
- Update option
- Legs and top are independent of each other
-

PRIVAT COMMUNITY

Families:

Painting table for the children over time develops into a desk. It grows in height and width. Additives for storage space should provide further flexibility at the table. Likewise, the kitchen table grows larger. For events with the extended family, this can either be extended or replaced. Round and square variants allow for a wide variety of communication

constellations. Small living spaces are usually very nested and it is difficult to relocate larger furniture through doorways into other rooms. Due to the detachability of the system, it still works well with larger table dimensions of up to 2m. Thus, a table can also be used for the terrace, possibly with a different table top option.

FROM PAINTING TABLE TO DESK

Community:

Community tables stimulate exchange among users. What is needed is a place where everyone can meet and find space. The number of people often varies here, as visitors from outside are also co-users and are brought along by residents. A simple and quick table extension offers great advantages here. The tables are lightweight com-

pared to extendable extension solutions and are easier to reposition in the room. A community uses a certain number of tables, usually at a height of about 75cm. However, at events, other heights are needed for standing or sitting. By repurposing table tops and legs, standing and lounging areas can be repurposed to create a new atmosphere.

COWORKING OFFICE FAIR

Office

Office spaces are usually designed clean and neutral, so do not distract from the work and increase the productivity of workers. Often, the well-being of workers suffers as a result, and they can create a little atmosphere and personality through their own design, such as photos or

decoration at the workplace. The solid wood frames and linoleum decor convey friendliness and warmth through their colors, shapes and feel. Nevertheless, they do not impose, they are intended to take the tension at work and provide a clear head.

Fair

Exhibition stands attract with their products and a valuable appearance. Natural colors and materials are becoming more and more popular. Products should be sustainable. The table system is an ideal support for the presentation. With its friendly appearance, it carries this idea throughout the entire design concept. The tables are usually

assembled and disassembled by two people. The table tops are stored separately from the legs, leaning upright in a ladder truck or lying on a pallet or transport box with rollers. Feet and frames are assembled in a separate box to save space. Frame and leg are also separable without tools and can be stowed separately if necessary.

LIVINGLINE

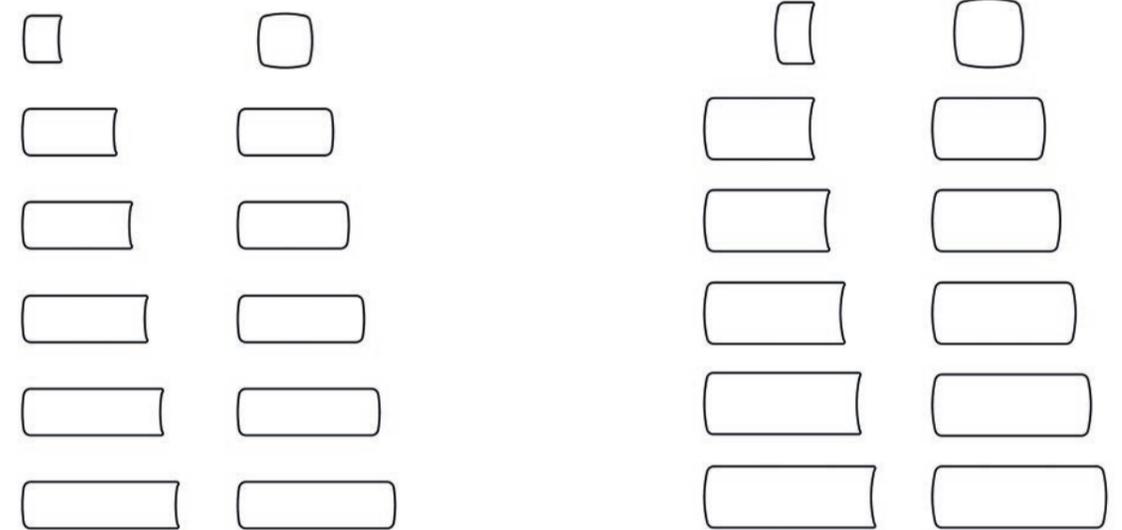

During the development period, two table shapes were created. Livingline corresponds to a more homely character and is intended by the rounded table ends, to loosen up the situation of the „board“ and provide for a more detached conversation.

Tischplattenmaße:
Dimensions:

80, 100, 120, 140, 160, 180, 200, 220 | x 80 (in cm)

60, 80, 100, 120, 160, 180, 200, 220 | x 60 (in cm)

In addition, there are extension modules that are also available in the listed table widths and lengths and can be freely combined with identical table widths.

OFFICELINE

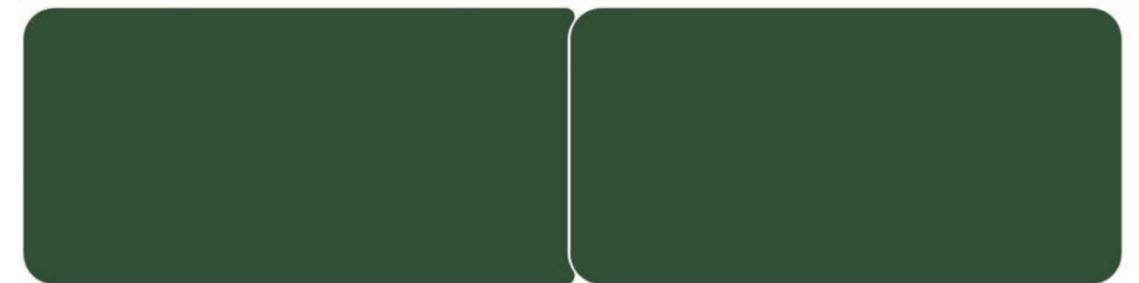

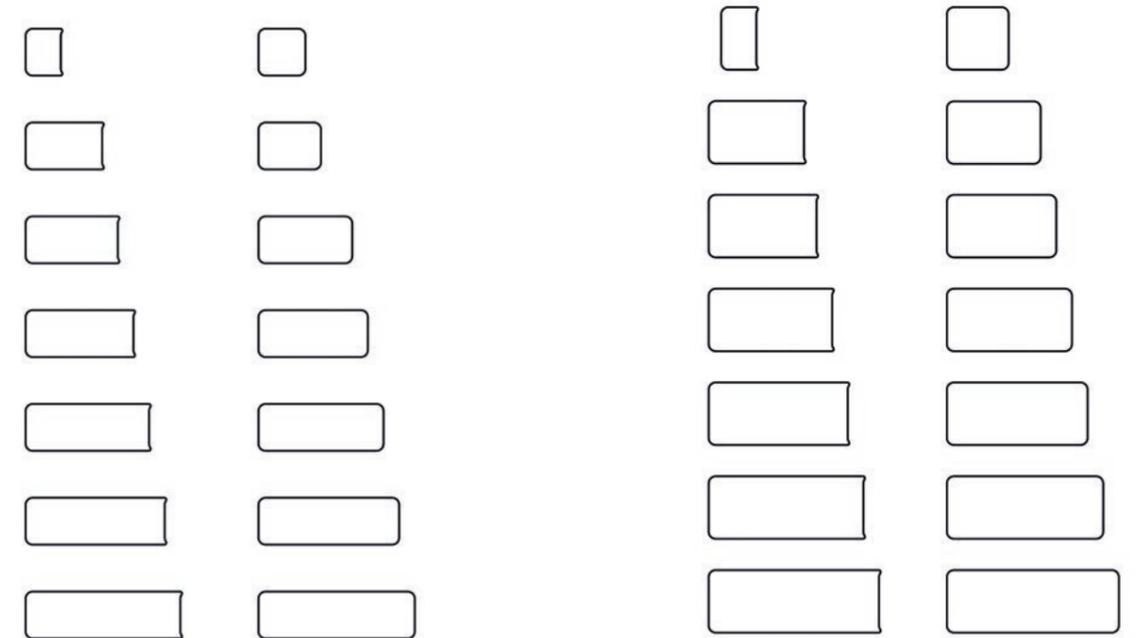

Officeline is designed to release the rigor of the workplace and convey friendliness and openness through the rounded corners.

Tischplattenmaße:
Dimensions:

80, 100, 120, 140, 160, 180, 200, 220 | x 80 (in cm)

60, 80, 100, 120, 160, 180, 200, 220 | x 60 (in cm)

In addition, there are extension modules that are also available in the listed table widths and lengths and can be freely combined with identical table widths.

MATERIAL

Table top: birch multiplex, oak veneer,
open table edge profiled Table legs: solid oak

available shades:

Oak nature

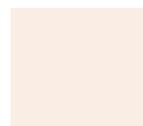

Oak white

Oak black

Table top: birch plywood with linoleum
coating, core plywood, open edge profiled,
underside backing paper

Linoleum Forbo Desktop:

mushroom
4176

powder
4185

olive
4184

mauve
4172

burgundy
4154

smokey blue
4179

DIMENSIONS

Table top:

80, 100, 120, 140, 160, 180, 200, 220 | x 80 (in cm)

60, 80, 100, 120, 160, 180, 200, 220 | x 60 (in cm)

Table legs:

H | 45, 75, 110 | for 60s wide table tops

H | 45, 75, 110 | for 80s wide table tops

** also available as double frame base
(for connections of table modules)*

FORMS

Living Line

Office Line

SURFACE:

Treated with natural oils and waxes.
